

Letters to the Editor ...

Mycoplasma Detection

Dear Sir: I have read with much interest the article "Mycoplasma: The Linking Pathogen in Neurosystemic Diseases" by Donald Scott, MA, MSc, published in NEXUS [vol. 8, no. 5, 2001]. I am a holistic veterinary practitioner and researcher in California, USA, who studied and trained in Germany with Reinhold Voll in his EAV [Electro-acupuncture by Voll] technique using a sophisticated electronic machine, the Dermatron, to evaluate the health of a human patient via its energetic value registered from specific organ acupuncture points. In this same circuitry, Dr Voll was able to test specific disease causative agents made into homeopathic form (Voll coined the word "nosodes" for these) to see what normalised the abnormal reading. This then told him two things: what was causing the disease in his human patient; and what he had to give (the detox nosode) to make his patient well.

To make a long story short, I pioneered its use in animal medicine in my private clinical practice, published my two years of research in EAV in animal medicine and for five years taught other veterinarians how to use the technique. Over these 31 years, I have been able to utilise this and other holistic therapies and vibrational medical diagnoses to produce true miracles of recovery in cases that were determined "untreatable" by orthodox medicine.

In 2002 I read the above-referenced article in Dr Mercola's medical newsletter, to which I subscribe. I was horrified that our government and military would use unsuspecting human beings in the US and Canada as guinea pigs for their "Frankenstein" patented product, and that they had genetically engineered "crystalline mycoplasma" to see what health effects this militarised weapon would have on people.

I contacted England's primary homeopathic nosode pharmacopoeia, the Malcolm Rae people in England, who knew about this already and had made a nosode from it. I immediately began testing many sick animals, my family, myself (I suffer from chronic fibromyalgia and chronic fatigue syndrome) and my own animals in 2002 and discovered we all tested positive.

Were you aware that this infective crystalline mycoplasma is still circling planet Earth and still infecting people and animals today in 2007? It is!

I am looking for *proof of current information* on the American government or any other country's government that is continuing this covert, nightmarish program of infection. Are there any animal researchers anywhere in the world who are investigating and corroborating what I have found? I wish to gather as much documentation as possible to enter into a class action lawsuit against the American government and military.

Sincerely,

Gloria Dodd, DVM, Holistic Veterinary Medicine, PO Box 1242, Gualala CA 95445, USA, email everglo@mcn.org, website <http://www.holisticvetpetcare.net>

NEXUS Articles as PDF Files

Dear Duncan: May I add my plea for your project of making all NEXUS articles available as pdf files? Thank you for taking this on.

I, for one, would love to have all the past issues available (my copies only go back to vol. 4, no. 6). There's so much that I often wish to re-read/refer to that I often spend hours sifting through my past copies (cursing when I find I must have lent one out and it's now gone—I don't do that any more!) for info. A computerised search would be a boon. Thanks again for all that you and your team do.

Kind regards,
Ian

[Dear Ian: We hope to make all our past articles and issues available as text-searchable PDF files, both on DVD and from our newly revamped website at <http://www.nexusmagazine.com>. Ed.]

EM Weapons and No Rights

Dear Duncan: Wonderful article on "Electromagnetic Weapons and Human Rights" [NEXUS, vol. 14, no. 3], except for one very important but very-little-known fact of life: nobody on planet Earth has any rights!

That is to say, until each and every citizen of the world has corrected the deliberate and entrapping mistakes on their birth certificates, there is no comeback with any laws, no rights can ever be claimed, and certainly no speaking out on any subject matter to do with *any* government official or office or, for that matter, any military unit anywhere on this planet, can be allowed without some form of reprisal taking place.

The Universal Declaration of Human Rights, the US Declaration of Independence, the US Constitution and also the Australian Constitution are exactly as George Bush described: "Just a goddamn piece of paper".

When George Bush witnessed the dismissal of Bill Clinton's impeachment trial and subsequent congressional hearing, he actually acquired the knowledge to implement the same procedures to save himself from any future misappropriations or misdemeanours, but what was worse for the people of the world was that this knowledge also allowed him to bring forth any executive order or law, entirely at his own discretion and without the acceptance of Congress, *forever!*

To cut a very-drawn-out story short, *all* languages on planet Earth have been modified and bastardised to the point that they actually say nothing, and with that knowledge anybody can do anything to anybody. If your body or group owns the printing

presses, the militaries, the lawyers, the judges and not forgetting the electromagnetic weapons, clubs and guns, you can do anything you like to anybody you like, whenever and wherever you like...and if you think for one minute that the media or judiciary will step in and prevail, then I suggest we *all* start believing in the tooth fairy again.

I will gladly debate with anyone on this planet the issues concerning language and the writing of laws, contracts, constitutions, treaties, trusts and, most importantly, declarations.

Hope against Type 2 Diabetes

Dear Editor: I have type 2 diabetes, and your article, "Our Deadly Diabetes Deception" [NEXUS, vol. 11, no 4, 2004], is the first one I have read on this disease that has given me any hope. For too many years, I have been on a steady diet of Glynase™ and metformin, without a hint that there was any way to effect a cure, and just happened to migrate to your web address while attempting to obtain some data re Dr Linus Pauling. And a very fortuitous web migration it turned out to be.

My compliments to you and to the writer of the article, Mr Thomas Smith.

James D., Kawaguchi, Japan

Urine, Your Perfect Medicine!

Hi Duncan: How are you these days? Long time no see! Good to see you're still putting it "out there". I see your publication everywhere.

The oppression of New Zealand's natural health industry is well underway. This nefarious takeover treaty by Australian and New Zealand government officials amounts to criminality against all New Zealanders who believed that they lived in a democracy. The day, not far away, that compulsory

... more Letters to the Editor

NB: Please keep letters to approx. 150 to 250 words in length. Ed.

vaccinations fall upon the population may be the day when Mr and Mrs "everything's okay" wake up to what's really going on. But I won't hold my breath, as New Zealanders continue to allow water fluoridation, accept mercury as a dental filling and allow ongoing wholesale destruction of our beautiful natural forests, waterways and seacoasts.

The good news is that there remains one medicine that no governmental agency can touch and no one can take away from you or your loved ones; a perfect medicine specially made to suit your body. You don't have to go see your doctor for a prescription, nor does it cost you a cent. It's a medicine you carry within your own body: your urine! It is the perfect, customised, natural medicine and universal cure prepared especially by you.

With over 3,000 natural health-promoting ingredients, it is wasteful to flush it all away. The healing principles of urine are recorded in over 5,000 years of human culture, but most especially Indian and Germanic cultures. Few people realise that they spread human urine on their face every time they apply certain cosmetics containing the common ingredient urea, which is obtained from human female urine.

For home use, take 10 to 20 drops of midstream, first-morning pee and hold it under the tongue until it naturally trickles down the throat. Using an eyedropper and placing under the tongue as said, there is no taste because the tastebuds are on top of the tongue. Just a few seconds is all it takes to ingest it.

Urine therapy gives back to the body lost trace elements, minerals, vitamins, enzymes and hormones conducive to cellular health. Urine contains antibodies specific to one's needs in sickness and good health. Provided diet is healthful, one's own urine is a homoeopathic remedy containing over 3,000 ingredients necessary to your

healthiness. Imagine having to buy all those things!

Urine is your own to do with it what you like. You can rub it into troubled skin where it will not smell on account of massage-induced absorption. You can gargle, douche, poultice, make homoeopathic drops of and bathe in your own urine to your heart's content, knowing fully well that you are using the most ancient and therapeutic medicine God has ever provided for the well-being of mankind.

Kind regards,

Nuclear Power Push

Dear Duncan: As both a reader of NEXUS and a listener to Radio NEXUS, I follow the course of events closely. Until now, I have been at a loss to explain the insane but sudden rush back to nuclear power.

Simply covering the development costs, as you suggested on Radio NEXUS 36, does not seem strong enough, but today I think I found another piece of the puzzle. It comes from the *Radio Times*, the UK's original TV listings magazine. It's produced by the BBC and these days is not known for the intellectual ability of its contributors. So there is still a query in my mind, as I will explain. However, the relevant text from the listing "*Horizon*, BBC2, Tuesday 10 April" reads:

"Yes, Moon science is big again. Not only is NASA planning more missions, but China, Russia, Japan, India and Europe all have lunar programmes. So why the scramble? The answer lies in a substance called helium-3, which is as common as muck on the Moon and could fuel nuclear fission—the fancy kind of nuclear power reaction that scientists are struggling to make viable. Hence helium-3 might just be the wonder fuel of the

future, and whoever colonises the Moon could control it—one of the worrying notions in a film that features several former astronauts and a man who used to be an undercover cop for NASA."

Is this guy (it's signed "David Butcher") confusing fission with fusion? However, it does answer a lot of interesting questions about why there's the push to reintroduce nuclear power and create panic about global warming.

Best wishes,
Beth F.

Product Placement Concerns

Dear Duncan: As a long-time reader and recent subscriber, I was horrified to read a couple of this month's letters to the editor [vol. 13, no. 3].

I would first like to acknowledge the good that NEXUS has done over the years; however, I believe that you may have just gone off the rails slightly. I was compelled to write this letter after reading letters headed "Persecuted by Health Alliance" and "Far-Infrared Sauna Success". Both of these letters in my opinion were blatant testimonials for products advertised in your magazine, prefaced with good arguments about the state of the established health industry.

Not just any advertisements, but ads that featured on the most expensive ad positions, being the inside front cover and outside back cover.

You have severely underestimated your readership if you think you can introduce "product placement" and not have it blow up in your face. For a magazine such as NEXUS, which I personally hold in very high regard and is one which often questions journalistic integrity (read the bottom of the NEXUS home page), I fear that your integrity has been morally compromised. I do not believe in coincidence, and without a sufficient rebuttal to the above allegations you have lost a long-

time reader and supporter.

Extremely disillusioned,
Dean V.

[Hi, Dean: I suspect your letter reflects the views of more than one reader, and I can certainly see and appreciate your point of view. It seems one happy Elanra customer's letter to us triggered off others. These ads have nothing to do with the product placement you cite. We have been running those ads in those positions for quite a few years now. There was no financial inducement; the ads would have run with or without the letters. If people get good results from things advertised in NEXUS, then I am going to continue telling readers about it for the short time we will be able to do so. Testimonials for ANY health product or service will soon be banned from appearing in anything, under new regulations coming soon. Ed.]

Help for Arachnoiditis Sufferers

Dear Duncan: I have read with interest Gil May's article on arachnoiditis [NEXUS, vol. 13, no. 5], and am so pleased that this article on the subject that no one in the medical profession likes to speak of was actually published.

I have also read comments by Peter Groves of the Queensland Association and then the follow-up by Derek Morrison.

I would just like to mention that there is also an association for sufferers of arachnoiditis in New South Wales.

Some of our members have decided to go through with litigation and others just want the comfort of knowing they are not alone with their pain and there is always someone they can call and talk to.

Members have made friends with each other at our meetings and swap information when the meeting is over and stay behind to chat.
